Highlights

* In 1962 legislatures met in 28 of the 50 States, and in Guam, Puerto Rico, and the Virgin Islands. They enacted 262 out of 532 bills related specifically to higher education.

* In the area of appropriations, a comparison was made in 13 States of their relationships to enrollments. The trend for the 3-year period 1960-63 indicated that in the majority of the States appropriations for current operations increased at a faster rate than enrollments.

* During the last 3 years there has been a trend toward more statewide studies of higher education but not toward the centralization of control and coordination in a single board. Instead, the tendency has been toward more coordinating boards which leave operating responsibility to individual governing boards.

* Twelve States enacted 16 laws relating to the organization and administration of institutions of higher education. From the data provided for this report, however, no action taken during 1962 appears to be an encroachment on the freedom of operation of higher institutions. In other words, there is no evidence of further infringement on the autonomy of governing and coordinating boards in higher education.

* In the area of public junior and community college legislation, the period has been characterized by a diversity of patterns for organizing and administering these institutions in statewide systems. Ten States, for example, in 1962 enacted 24 laws in the area of junior college development without foreshadowing support for any one pattern of administration.

* Enactments pertaining to student financial aid were largely in the form of amendments to existing laws. A variety of means were authorized to extend financial aid to help students meet rising costs in higher education. Eleven States enacted 14 laws in this area.

* During each of the 3 years under review, legislatures have enacted laws creating new institutions and providing for the substantial expansion of programs at existing colleges and universities. In 1962, for example, 5 States enacted laws creating new institutions, and 8 States provided for significant expansions of existing programs and facilities.

FOREWORD

This is the sixth annual review and digest of State legislation relating to higher education. This report has become a stabilized and expected service, as is attested by letters received from many State officials and college and university administrators.

For aid in the compilation of this report, the Division of Higher Education is grateful to the officials of State departments and institutions of higher education and to the directors of State legislative reference services, who supplied basic legal documents for their respective States, reviewed preliminary drafts, and cooperated in the entire project. In addition, noteworthy assistance was given by the Council of State Governments; the Legislative Services Branch of the Office of Education; the Law Library of the Department of Health, Education, and Welfare; and the Law Division of the Library of Congress.

In the compilation, verification, and editing of the exhibits and summary in this bulletin, the authors were once again assisted by James K. Palmer, Contract Consultant, and Flora B. Heath, Research Assistant, of the staff of the State and Regional Organization Section.

At the time that the major work for this project was being performed, Dr. Martorana was the Chief of the State and Regional Organization Section. Early in 1963, he assumed a new position as Director, Office of Planning for Higher Education, New York State Education Department.

PART I

OVERVIEW OF STATE LEGISLATION RELATING TO HIGHER EDUCATION

Introduction

This sixth annual review of State legislation relating to higher education contains abstracts of both laws enacted and bills introduced but not enacted, and general observations and trends indicated in higher education. It is the intention of this survey to provide data that will be helpful in planning higher education, including all matters pertinent to such planning that are given legislative attention; such as, appropriations which bear on budget planning, institutional growth which has meaning in planning for expansion, financial aid for students which affects enrollment expectations, and personnel practices which relate to the broad and growingly serious problem of staffing. Most of the legislation reported in this survey has an effect on colleges and universities either directly or indirectly and has a broad influence on policies in the area of post-high school education. The higher education bills of the legislative sessions which met between January 1 and December 31, 1962, as available to February 15, 1963, are covered in this 1962 survey.

This survey does not attempt a legal analysis of the higher education bills. It is presented mainly for information or for administrative use. The completeness of any State exhibit is dependent on the availability of printed laws or bills and the extent to which cooperating officials are able to furnish the legislative materials requested. Act numbers or other designations of the respective bills have been supplied whenever available.

Preliminary editions of materials herein reported, containing a number of State exhibits, are distributed in advance of this final report to make such information available to interested agencies as early as possible. Also, this gives persons close to the facts in each State an opportunity to review its exhibit and to make comments. Two such mailings for the 1962 legislation were sent prior to the final compilation of this bulletin. In addition to the distribution of the two preliminary editions, the writers sent a copy of the State exhibit as it was completed back to the original sources in each State for verification of the data included. This practice permits the original reporter to review his exhibit and to suggest necessary corrections to the authors prior to its inclusion in a preliminary edition. Thus, most States have an opportunity to review their respective exhibits twice, and those States which do not appear in a preliminary mailing also have a chance to check their exhibit before it appears in final form in the published bulletin.

General Observations

Higher education is a high-priority legislative concern at the State level. This is clear even from a simple count of the States that took up the matter this year. During 1962 the legislatures of 22 States and the 3 territories of Guam, Puerto Rico, and the Virgin Islands met in regular session, and a special session was held in 6 additional States, making a total of 31 jurisdictions for the legislative year. Seven of the legislatures holding regular sessions also held adjourned, extraordinary, or special sessions. Higher education legislation was considered by 26 legislatures (23 States and 3 territories). A total of 22 States and 3 territories reported legislation enacted; 15 States and 1 territory reported bills rejected; most reported that both successful and unsuccessful proposals had been introduced. Of 532 bills relating specifically to higher education, 262 were enacted into law and 270 separate measures were introduced but not enacted.

Following the practice adopted in earlier surveys, the scope of legislative activity in certain major areas is described in table 1. The same number of major categories were used in this 1962 report as were incorporated in last year's report. The following observations and data relate to the 7 general categories and 16 subcategories used in the organization of the table.

States vary greatly in the scope of subjects in the realm of higher education that draw legislative attention and in the success of the legislation introduced. This statement is based on the summation column and lines of table 1 and merits some comment before the various subject areas of higher education are discussed in more detail.

At one extreme in scope of attention to higher educational legislation reported by States in 1962 are Louisiana, which reported activity in 13 of the 16 categories shown in the column headings of table 1, and Massachusetts and New York, each of which reported 12 areas of interest. At the other extreme are New Mexico, which reported only on one area, and Guam, which reported 2 areas of concern. As a general rule, the States reporting higher educational legislative interest took up proposals dealing with some 7 items (the median for the group of States) of the 16 in the table--not quite a half of those possible.

Great variation is seen also in the concentration of State interest on particular subject areas of legislation. Twenty States and 3 territories, for example, made appropriations for current operations; 16 States and 1 territory took up matters relating to personnel administration; 14 States and 2 territories considered appropriations for capital outlay; 15 States discussed surveys and studies; and a like number deliberated on topics relating to boards of control.

Within the categories shown in the table, some indicate much more striking success in legislative attention than others. This line of inquiry, however, should be pursued more cautiously because some of the differences evident may be due to inadequate reporting of legislative activity, especially of that introduced but not enacted. Moreover, it would be unwise to suppose that all proposals introduced were truly well conceived and educationally justifiable. Keeping these cautions in mind, the reader can note such comparisons as the 100 percent enactment of general appropriations for current operations and capital outlay which were introduced--an observation that was to be expected since this study deals only with the final outcomes of legislation and not with the level or character of debate which accompany its examinations in legislative halls. The data do not show items added to or deleted from appropriation acts between their first presentation and their final passage. Other areas of high success patterns, according to the last lines of table 1, are bond issues, on which 12 States reported favorable action and none unfavorable; and general financial procedures where 3 States and 1 territory (out of a total of 6 legislatures) reported enactments.

In contrast, "institutional expansion" shows only 1 State reporting a law while 7 reported bills that failed in passage. Bills on matters pertaining to trustees were not made law by almost as many States as acted favorably on such proposals, and student loans show twice as many States failing to enact laws as reported enactments in this field. More States also reported rejection of studies and surveys than acted favorably on such proposals.

These findings suggest that the field of legal analysis in higher education would be a fruitful one for more research. Did bills in various fields fail because they were basically educationally or fiscally unsound? Were they poor propositions on other grounds? Were they poorly written or badly presented? Answers to such questions as these are beyond the data gathered for this report. They should, however, be pursued in other related inquiries.

Trends

Appropriations

As a general pattern, State appropriations for current operations in higher education in recent years show an upward trend. By referring to table 2, the reader can note that, of the 13 States for which general appropriations data in dollar amounts were available for this year as well as for the preceding years, 8 showed a greater percentage increase than last year; 3 States had a smaller percentage increase than in 1961-62; 1 State showed the same percentage increase; and 1 State showed a definite percentage decrease as well as a dollar decrease in the amount appropriated. Thus, the usual rule for the States considered is that the percentage increase of general appropriations provided by the 1962 legislatures for current operations is greater than it was for 1961-62. For the States listed in table 2, there was an overall dollar increase in the 1962 appropriations over the preceding year of $183,000,400. It is apparent that State appropriations for current operations of institutions of higher learning have been increasing yearly with few exceptions.

The reader is cautioned in using the data reported in table 2 and later in the separate State exhibits that comparisons should not be made among appropriations of the several States due to the many differences from one State to another in the content of appropriation bills, as well as the method of appropriating funds. Comparisons can be made, however, among the institutions within any one State, and of the year-to-year appropriations for the same State.

West Virginia	16,946,237	19,450,195	14.8	23,359,913	20.1

1/ This decrease is due to an across-the-board budget reduction due to fund shortages.

An analysis of capital outlay appropriations, although reported in the State exhibits, is not summarized in a table similar to table 2 because it would not present a clear picture of activity in this area. Unlike day-to-day operation and maintenance programs of an institution, building programs are of a more fluid nature, a larger program being planned for 1 year with perhaps a few minor ones the next. As a result, appropriations from year to year in a given State usually fluctuate greatly and cannot validly be translated for purposes of trend analyses.

This year there is introduced in this study an exploratory comparison which examines the question: In given States are trends in appropriations keeping pace with changes in enrollments in colleges? The comparison based on data readily available in Office of Education reports is shown in table 3.

Table 3.--Comparison of the percentage changes in the appropriations for current operations and in total enrollments for 13 States: 1961-62 with 1960-61 and 1962-63 with 1961-62 1/

1/ Based on enrollment statistics found in the Opening (Fall) Enrollment in Higher Education, 1962, 1961, 1960: Institutional Data. U.S. Department of Health, Education, and Welfare, Office of Education, Washington, D.C.

The reader, by referring to table 3, can observe that in 1961-62, in 5 of the 13 States considered, monies appropriated for current operations showed a significantly higher percentage increase over 1960-61 than occurred in enrollment figures for the same period. Of the other 8 States, 2 showed greater increase in enrollment than appropriations, and 6 showed no significant differences in the ratio of change in the two items, that is, did not show a differential approximating even 5 percentage points.

In the 1962-63 period, 7 of the 13 States had a higher percentage increase in appropriations over 1961-62 than was found in enrollments over the same period of time. In 3 States, the increase in enrollment exceeded that in appropriations; and in 3 other States, there was no significant difference between the two.

The following States for the period 1960-61 to 1962-63 maintained a higher percentage increase in appropriations than in enrollments: California, Colorado, Maryland (at a lessening rate), New York, South Carolina (at an increasing rate), and West Virginia. For the same period, 3 States (Alaska, Louisiana, and Michigan) maintained a lower percentage increase in appropriations than in enrollments.

As was stated above, this comparison should be viewed as exploratory, for there are admittedly weaknesses in the data on which the comparison is based, even when confined to a particular State. For example, the use of fall enrollments restricts this side of the comparison to only "degree-credit" students. In recent years, increases in students enrolled in non-degree programs such as those reported in the Office of Education study, Organized Occupational Curriculums, have been sizable. Data current enough to be used in the foregoing comparison, however, are not available. The findings of the exploratory comparisons, nonetheless, do suggest that it would be appropriate to continue such a comparison of appropriations with enrollments in the future. Predictions are strong that enrollments should increase rapidly during the next 5 years. The question of whether appropriations will keep pace with increasing enrollments, therefore, merits continued examination.

Physical Facilities

The fact that fewer States in 1962 (in comparison to other recent years) appropriated funds for repairs and improvements of existing facilities and for new ones raises several interesting questions. In 1962 there were only 5 of the 28 States which appropriated funds for repairs or improvements of existing facilities. This is a significant decrease when compared with 1960, a comparable legislative year, when 20 of 28 States made such appropriations. In 1961 and 1959, again comparable legislative years, there were 39 of 47 States and 36 of 49 States, respectively, which made such appropriations.

Authorizations for the construction of new buildings followed a comparable pattern. For example, new building construction was authorized by 5 States in 1962, and in 1960 by 3 States. In 1961 there were 17 States that enacted such legislation, while during 1959, a comparable legislative year, 22 States enacted laws authorizing new building construction.

Are the few States in these categories in 1962 due to the fact that colleges and universities are catching up with the backlogs of need for reconditioning of buildings? Authorities generally do not think so. It has been stated that, "Public institutions should be spending at least $150 million per year in remodeling, replacing, and repairing substandard and functionally obsolete facilities. During the past 3 years the actual amount expended by public institutions for these purposes has averaged less than

$20 million per year." 1/ Is the attention given in recent years by the Federal Congress to proposals of financial aid to college construction of academic facilities tending to cause the States to delay action at their level? The data compiled in this report do not provide an answer to this question. If the speculation is accurate, however, it bodes ill for the future because delay of needed action to provide facilities will make the accommodation of expected enrollments more difficult than ever. These data further indicate that in view of the general nationwide need for facilities relatively few States during any recent legislative year have found it necessary, or possible, to enact legislation of this type. When such projects are authorized, the question of appropriate financing becomes an issue.

As was noted in last year's survey, there is a definite trend toward centralizing the financing of new building construction. The tendency to utilize quasi-governmental corporations when capital improvements and construction cannot be directly financed by legislative enactment is evidenced by the fact that in Alaska the Board of Regents of the University of Alaska was urged to establish a nonprofit corporation to finance the construction of the heating plant needed by the university. Massachusetts last year established the Lowell Technological Institute Building Authority. New York has a College Dormitory Authority, and other States have similar agencies.

In 1962 a total of approximately $291,933,200 was authorized in bond issues in 8 different States for which data on amounts were available. The total approximate amounts of bond issues authorized by the States in legislative session for each year from 1958 to 1961 are as follows: 1958 - $228,100,000; 1959 - $409,500,000; 1960 - $104,300,000; and 1961 - $237,141,000. These total amounts show considerable fluctuation from year to year for the 5-year period, 1958-1962, covered by these data. It should be noted that the 1962 amount includes an authorized bond issue of $223 million by the State of California. In 1958 California failed to enact a similar $200 million bond issue when it was put to a referendum. Public feeling in that State has obviously changed. From this one State's experience again rises the question: Is public awareness of the needs in higher institutions for needed facilities lagging progressively farther behind?

1/ These figures are from working papers of a speech by W. Robert Bokelman, Chief, Business Administration Section, Division of Higher Education, U.S. Office of Education, entitled "Higher Education Facilities Needs," presented at the 1962 Fall Conference of the Building Research Institute.

California's bond issue provided slightly over $102 million for the University of California, approximately $100.5 million for the State colleges, and $20 million for junior colleges. The approximate total enrollment of degree-credit students, according to the Office of Education data for the fall of 1962, at the University of California was approximately 91,000; at the State colleges, 88,000; and at the junior colleges, approximately 37,000. When a comparison is made of the institutional distribution of the bond issue with the fall 1962 total enrollment for each of the three institutional categories noted above, it is observable that the University of California and the State colleges received nearly the same dollar amount from the bond issue and that their total enrollment had a difference of only 3,000 degree-credit students. The junior colleges with an enrollment figure of 37,000, however, received at first glance a disproportionate share, $20 million, of the bond issue. Reflection on the fact that the junior college buildings in California were until this year financed entirely by local district tax funds puts the distribution into a more proper perspective.

Past surveys show that State legislative enactments on building construction and bond issues were related to available Federal assistance. In 1961 this relationship continued to be somewhat in evidence. Of 67 State enactments for building construction and bond issues, 6 were connected with Federal programs. However, of 30 such State enactments in 1962, only 1 was noted as being connected with a Federal program. Rhode Island authorized a bond issue and in so doing empowered the Director of the Department of Administration to apply for funds, enter into contracts, and otherwise cooperate with the Federal Government to obtain loans, grants, or other aid. That the action of this single State enacting such legislation during 1962 is an adequate indication that the influence of Federal assistance programs on higher education bond issues and construction is declining is questionable. The record of experience of use of the College Housing Loan Program under the Housing and Home Finance Agency shows generally that building construction plans are geared to take advantage of available Federal aid.

Financial Procedures

Nearly one-third of the States which reported any legislative activity pertaining to higher education during 1962 introduced bills relating to government aid to higher education on the Federal, State, and local levels. Most of this legislative concern was on the State level. For the most part, such enactments were in addition to appropriation bills enacted. All but one State introducing State-aid legislation enacted such bills. During 1962 there was little indication that States have looked to Federal assistance to further growth in the number of institutions operating within their boundaries or toward Federal aid in areas other than building construction. Rhode Island, as noted earlier, in a bond issue enactment authorized application for Federal assistance. California did request Federal funds to subsidize foreign students attending State institutions of higher learning, and to aid States in meeting State expense in educating such students. With regard to State aid, Kansas provided for the distribution of revenue from the retailers' sales tax fund, including given amounts to the municipal university fund and to the junior college fund. At the local level, the usual nature of enacted legislation was the authorization of tax levies to given institutions. For instance, in Mississippi counties wishing to support an agricultural research program at the Mississippi Experiment Station are authorized to retain.1 mill of the 4-mill State ad valorem tax on condition they match it with one-fourth-mill local levy.

In the areas of income tax exemption and tax deduction for costs of attending college, 3 States introduced but failed to enact such legislation. In 1961, 5 States introduced but did not enact similar legislation. This tends to substantiate the supposition that the financial position of many States will not permit a decrease in monies received from State taxpayers.

Institutional Growth

A major subject of legislative interest is the development of a statewide program of higher education. The present upward surge of increased enrollments and the projected additional matriculations into institutions of higher learning necessitate appropriate institutional growth. To do this, academic programs must be revised and expanded; physical facilities at existing institutions must be expanded; and new colleges created. The Virgin Islands in 1962 expanded its education system by enacting two laws. One established the College of the Virgin Islands and appropriated funds for it; the other established the College of the Virgin Islands Fund to administer the money and property of the college. To illustrate the extent of legislative concern in this area, there have been 117 legislative enactments during the 6 years covered by these surveys as summarized below:

	Number of enactments for:	
Year	Expansion or reorganization	New institutions authorized
1957	16	11
1958	6	7
1959	14	2
1960	7	5
1961	32	7
1962	6	4

Statutes calling for the renaming of institutions in 1962 also suggest institutional expansion. A change in the name of an institution is often a necessary adjustment to reflect properly a heightening and broadening of educational functions in the institution. The following States enacted such legislation. In Massachusetts the name of the Essex County Agricultural School was changed to the Essex Agricultural and Technical Institute. Virginia removed the word "junior" from the title of two colleges which remain 2-year branch colleges of William and Mary. Mississippi changed the name of Mississippi Southern College to University of Southern Mississippi. These State legislative actions are illustrative of the drive characteristically shown by higher institutions to achieve a higher or broader status. Notice the "status" attachments to the changes in names of the institutions--an agricultural college becomes a "technical institute," junior colleges drop the word "junior," and several institutions push toward university status. The legislative activity that has been going on for the last 5 years to change names of institutions shows the following years and number of enactments: 1957 - 17; 1958 - 1; 1959 - 14; 1960 - 5; 1961 - 10; and 1962 - 3.

2-Year Colleges

In 1962 there were 10 States, almost half of the States which reported legislation pertaining to higher education, which enacted a total of 24 laws relating to junior and community colleges, their organization, administration, and financing. As was noted in the 1961 survey, much of the enacted legislation still remains in the classification of general enabling legislation to establish or expand 2-year collegiate education. It therefore illustrates the continued recognition of the 2-year collegiate system as a distinct stratum of education. The remaining enactments, as in 1961, were specific, i.e., pertaining to certain 2-year college-type institutions or to given administrative or supportive governmental units.

Kentucky in 1962 enacted legislation initiating action toward the establishment of a statewide system of 2-year community-junior colleges under policy and administrative control of the University of Kentucky, but with a local advisory board appointed by the Governor for each community college. Five existing extension centers are to be developed into community-junior colleges, and 5 new junior colleges are planned. New Jersey provided a plan for the establishment and operation of "county" colleges. Definition of these colleges in the law shows them to be of a type similar to those known in other States as community-junior colleges. Any county or group of counties may establish such a college, but only after approval by the State Board of Education that it is needed and that the local revenue resources are sufficient. Each county college will be governed by a corporate board of trustees. The plan places the local support and control of the college on a different basis from that of the local public elementary and secondary schools. Georgia authorized 2 new junior colleges; 1 yet to be voted on in a referendum for a constitutional amendment. If passed, DeKalb County Board of Education will operate a community-junior college. All other such institutions in Georgia operate under the Regents of the State University System. Alabama provided for the establishment of a junior college to be located in any county having a population within specified limits, and for a board of trustees to govern such college.

The following States enacted representative legislation relating to financing the operation of 2-year colleges: Arizona, California, Colorado, Kentucky, Maryland, Mississippi, and New Jersey. Maryland authorized an additional $5 million in State bonds to provide 50-50 matching funds with local governments for construction of buildings for community colleges. Mississippi created the Four-County Gulf Coast Junior College District. It is a new "pilot plan" for possible later statewide use, removing the institutions from "discretionary support" of county boards of supervisors.

Again this year, as in 1961, State legislatures show an interest in the controlling body of 2-year colleges. As indicated above by the actions of such States as Kentucky, New Jersey, and Mississippi, State legislatures have not yet devised or accepted a standard plan for the State-level supervision and coordination of 2-year colleges. Whether control of such colleges should vest in a separate board, a State university, or in an existing State educational agency is a question that various States answer differently. The States which have enacted general enabling legislation to establish 2-year colleges in recent years have followed no set pattern in creating the controlling body for these colleges. On the principle that a local voice should be assured in the government of 2-year colleges, however, there is more agreement. This is seen, for example, even in a State university controlled system as in the case of Kentucky.

During the 6 years in which State legislation has been reported in these surveys, there have been 183 enactments specifically dealing with the following areas of 2-year college legislation: organization and administration; finance; bases on which State aid is provided; and curriculum, degrees, and standards. Many of the general organization acts listed below deal directly and indirectly also in the areas of finance, State aid, and program. These acts, however, are listed only in the organization and administration column.

	Number of enactments for 2-year colleges in the areas of:			
Year	Organization and administration	Finance	State aid provision 1/	Curriculum, degrees, standards
1957	24	14	6	5
1958	4	4	1	1
1959	32	2	7	2
1960	6	5	1	1
1961	25	13	3	2
1962	12	9	2	2

Student Finances

Student aid legislation in recent years seems to have fallen into a pattern of refinement of details in existing programs by addition and deletion to existing legislation through amendments. Legislation relating to financial assistance to students enacted by the States, in 1962 as in 1961, was overwhelmingly in this form. A total of 14 States passed laws pertaining to student finances.

Student fees were increased by 4 States. California increased the nonresident student tuition fee from $180 to $360 at State colleges. South Carolina increased student fees by $50 at all institutions, except South Carolina State College. Mississippi, as a result of a reduction in its budget request, found it necessary to increase student fees. Interestingly, Mississippi also passed legislation which eased nonresident costs at its institutions to outstanding students from without the State.

In Massachusetts savings banks are authorized to make certain loans to students guaranteed in whole or in part by the Massachusetts Higher Education Assistance Corporation. South Carolina created the South Carolina Defense Scholarship Fund to enable State students to take advantage of the National Defense Education Program. This fund actually provides for loans to students at institutions of higher education and for repayment of such loans.

In Louisiana the Thomas H. Harris Scholarship Foundation now includes student beneficiaries attending Louisiana State University in New Orleans and at Alexandria. In New York scholarship or fellowship holders are granted leaves of absence for reasons of national welfare, thus extending the period of time during which such holders shall be entitled to the benefits from such awards.

The above reference to several specific States and amendments to laws relating to student aid illustrates the variety in the enactments in this subject category. With costs of higher education continuing to rise steadily and States increasingly extending opportunity for youth to this level of education, enactments of this type can be expected to continue or even increase.

Personnel

There were at least a dozen different subject areas pertaining to personnel associated with institutions of higher learning receiving legislative attention. The areas of retirement, salaries, and insurance received more attention than the other remaining personnel areas, for example, sabbatical leave, pensions, and tenure. Retirement legislation had the distinction of appearing more frequently than any other personnel area. Faculty salary improvement, however, was also notable. Such States as the following made provision to increase faculty salaries: California, Kentucky, Maryland, New York, South Carolina, Virginia, and West Virginia. In Louisiana, as a result of State-level budget cuts, however, merit increases that had been earned could not be granted, additional faculty members could not be employed to reduce the student-faculty ratios, and promotions could not be granted to offset offers of employment at higher salaries in other institutions outside the State. This notable faculty salary improvement by most of the above-named States may well indicate the intensity of State recognition, of the necessity of attracting and maintaining well-qualified college-level teachers. This reflects the growing competition among colleges and universities to obtain well-qualified college teachers. Better salaries and fringe benefits help to get this kind of personnel. In 1962 as in 1961, 1960, and 1959, nearly all legislation enacted was aimed at refinement of details of the various personnel policies dealing with salaries, retirement, and insurance. There were no States noted in 1962 that enacted broad policies in the personnel field.

Trustees

Over a third (10 out of 25) of the legislatures which enacted laws in 1962 enacted one or more bills relating to trustees of higher institutions. Legislatures, in seeking to effect a better educational system, often direct legislative action toward agencies responsible for administering the institutions of higher education. Colorado in 1962 created an advisory committee on junior colleges to advise the State Department of Education, the State Board of Education, and the general assembly on matters affecting State junior colleges. In Mississippi a junior college commission was created to govern the newly created junior college district. New boards, commissions, committees, and councils in addition to the illustrations just mentioned were created in Kentucky, Massachusetts, South Carolina, Virginia, and West Virginia. These were established in some cases to serve as advising, investigating agencies, and in others as controlling bodies of new or reorganized institutions. All other enactments amended existing laws on matters of detail about the selection, composition, and tenure of board members.

A perusal of enactments of 1962 State legislatures discloses no significant action that (from the data provided to compile this report) can be interpreted as an encroachment on the freedom of operation of higher institutions. Concern about such encroachment has been high among college administrations in recent years. 2/ An act in the opposite direction, in fact, was passed in Massachusetts this year. The act clarifies the status and authority of the trustees and the administration of the University of Massachusetts.

Surveys

In the 1961 report of State legislation relating to higher education, 31 States were listed as having made provision for some type of statewide survey of the facilities, finances, programs or administration of higher education, during the period of time covered by these Office of Education surveys. Six additional States can be reported as a result of 1962 action. Mississippi in 1962 directed the Board of Trustees of State Institutions of Higher Learning to study in detail the entire higher education system, particularly the extension programs of the various senior colleges. In Virginia the State Council of Higher Education was directed to study the State medical school, the teacher training facilities and potential teacher supply, and vocational education at the post-high school level. Massachusetts provided for establishment of a special commission to conduct a study of certain phases of education in the State and to compare them to other States toward improving and expanding State education. California, Georgia, and West Virginia reported studies established of lesser scope.

The following summary shows the number of State legislative enactments relating to various types of higher education surveys during the 6-year reporting period:

	Number of enactments calling for surveys of:			
Year	Localities or institutions	Programs, curriculums, or degrees	Statewide higher education	Junior colleges
1957	9	2	8	1
1958	2	3	9	2
1959	5	1	10	1
1960	1	1	3	1
1961	9	5	13	2
1962	2	3	2	2

Approximately one-half of these 97 enactments listed above authorized, continued, or otherwise affected statewide surveys. An analysis of the statewide studies completed between 1956 and 1959 was reported in an Office of Education publication entitled Advance Planning to Meet Higher Education Needs, Recent State Studies, 1956-59. 3/ Since that release, as seen in the above tabulation, 44 studies have been called for, 18 of which were statewide in scope.

Other Areas

Civil rights remains an area in which only a few States each year introduce legislation. Georgia in 1962 repealed a much criticized law which had placed age limits on college applications. The law had been designed as a segregation measure. When the law became effective, all of the State colleges were still segregated. Most of the college desegregation applications had been filed by Negroes above the stated age limits. 4/ In New York three antidiscrimination bills were not enacted. These bills prohibited discrimination of persons because of race, color, or religion seeking admission to certain educational institutions and seeking employment in educational associations. It should be noted that these antidiscrimination bills were amendments to further strengthen the already strong antidiscrimination laws in the State.

The Federal Government enacted a law in April 1962 authorizing grants for educational television broadcasting facilities. These grants may be awarded to tax-supported colleges and universities to assist in the construction of educational television facilities. The Federal funds will be matched by the grantees; 50 percent for new construction plus 25 percent for existing facilities, but the total Federal share may not exceed 75 percent of the new construction cost. Related legislation in several States was reported in 1962. Virginia created a State Advisory Council on Educational Television to develop ETV stations, to which the State may contribute up to one-third of the cost. Kentucky created the Kentucky Authority for Educational Television to set up and operate an ETV network in the State. Other States over the past few years have enacted such laws. It is possible that with the enactment of the Federal law still more States will be encouraged to enact ETV legislation.

As has been noted in the past surveys, there were certain areas of legislative concern which appeared only once or at most a few times in State exhibits. For instance, particular States considered such other areas as the use of the right of eminent domain, competitive bids whereby institutions of higher learning would be allowed to make use of such bids without the necessity of advertising their needs for furnishings and equipment, and exchange programs which provide various approaches to student and/or teacher exchange between different States. In no category, however, was legislative activity notably high.

Concluding Remarks

Even though 1962 was an "off-year" as far as legislative activity generally is concerned (fewer States meeting during even-numbered than in odd-numbered years), interest and activity in the field of higher education

---

4/ Bruce Galshin. "State Legislation Affecting Higher Education in the South, 1962." Atlanta, Georgia : Southern Regional Education Board, p. 4.

was relatively high. Virtually all legislatures that met took up proposals related to education above the high school level. All but one that did so enacted laws in at least one area of higher educational interest. Some did so in a dozen or more areas.

Most of the States increased their appropriations for institutions of higher education. A noteworthy exception was the State of Louisiana which had across-the-board reductions in the amounts appropriated for higher education. Thus, while most States in 1962 increased faculty salaries, Louisiana reported retrenchments in the form of increased workload and forestalling of increases and promotions. Besides improving salaries, much attention in 1962 legislatures was given to fringe benefits, especially retirement plan provisions.

An exploratory comparison of rate of growth in recent years in higher educational enrollments and in appropriations showed interesting results. Five of the 13 States in one year and 7 of the 13 in another year of the comparison increased percentagewise their appropriations for current operations to a significant degree at a faster rate than enrollments in colleges and universities increased in the same States. Continued inquiry into this comparison would be worthwhile.

Fewer States in 1962 appropriated funds for repairs or improvements of existing facilities and for new construction than in other recent years. Recent debate on action by the Federal Government in the field of financial aid for construction of academic facilities may have encouraged some States to delay related legislation.

The legislation enacted by a few States in 1962 to establish 2-year colleges indicates that as yet no definite or set pattern is followed by States in organizing and controlling such colleges. The general rule is that a local voice in the government of these institutions is legislatively assured. A wide variation in patterns for State-level administration is evident.

There was continued legislative concern in 1962 in the field of financial assistance to students. The cost of obtaining a college education is increasing every year. Recognizing this fact, many States have enacted laws authorizing scholarships and loan programs for qualified students. Legislation in 14 States in 1962 extended and refined statutes in this category.

In summary, the three predominant areas of legislative action affecting higher education that were particularly notable in 1962 were the expansion of 2-year college programs, faculty salary improvement and improvement in general personnel administrative benefits and procedures, and provisions for student financial aid. Legislative attention to other areas appeared in much less frequency of concentration, both with respect to the number of States involved and in the number of proposals pertinent to the topic.

PART II

ABSTRACTS OF STATE LEGISLATION RELATING TO HIGHER EDUCATION

January 1, 1962, to December 31, 1962

Arrangement

The items of legislation for each State are divided into two groups: (1) those which were enacted, and (2) those which were introduced but not enacted. Within each group the order of items is numerical, by Chapter or Act number for enacted legislation and by Senate Bill numbers followed by House Bill numbers for introduced but not enacted legislation.

Abbreviations

The following is a key to the abbreviations used regularly in the digests of State legislative activity:

* - designates an appropriation act or bill

A. - Assembly

Adv. - Advance

Amend. - Amended

B. - Bill(s)

C. - Concurrent

Ch. - Chapter(s)

Const. - Constitutional

Doc. - Document

Eng. - Engrossed

Enr. - Enrolled

F. - File

H. - House

J. - Joint

L. - Legislative

No. - Number

P. & S. L. - Public and Special Laws

Priv. - Private

Publ. - Public

R. - Ratification Number

Res. - Resolve(s) or Resolution(s)

Rev. - Revised

Stat. - Statute(s)

Sub. - Substitute

ALABAMA (1)

Special Session, June 12 - July 14, 1962

Legislation Enacted

1-1 Building Designation (Act 10) Resolves that the new boys' dormitory at Jacksonville State College be named "Maude Luttrell Hall." (H.J.Res. 13)

1-2 Building Designation (Act 37) Resolves that the new girls' dormitory at Troy State College be named the "Catherine Collins Gardner Dormitory." (H.J.Res. 18)

1-3 Educational System (Act 41) Provides for the creation of a public corporation in each county having a population of at least 250,000, but not more than 500,000, to promote and encourage education on a college or university level. Provides for the powers, functions, duration and dissolution of such corporation. (H.B. 92)

1-4 Commendation (Act 102) Commends the State Superintendent of Education, on expiration of his appointive term, for his services, leadership, and contributions to public school education in Alabama. (H.J.Res. 31)

1-5 Faculty Commendation (Act 116) Pays tribute to the memory of certain former faculty members of Alabama College in recognition of their significant contributions to education in Alabama. (H.J.Res. 37)

1-6 Junior College (Act 124) Provides for the establishment of a junior college to be located in any county having a population of not less than 65,000 nor more than 95,000, and for a board of trustees to govern such college. (H.B. 112)

Legislation Introduced but Not Enacted

1-7 Bond Proceeds - Allocation (H.B. 20) To amend existing law relating to the Alabama Education Authority so as to allocate $24,064,600 from certain bond proceeds among State institutions of higher learning.

1-8 Junior College (H.B. 70) To provide for the establishment of a junior college in Perry County, to create a board of trustees, and to provide for the financing of such college.

1-9 Bond Proceeds - Allocation (H.B. 162) To direct the Alabama Education Authority to make certain allocations from earnings on the unexpended proceeds of a bond issue, including $200,000 to the State junior college located in Franklin County.

ALASKA (2)

Regular Session, January 22 - April 12, 1962

Legislation Enacted

2-1 Bond Issue (Ch. 47) Amends existing law authorizing bond issue for capital improvements at the University of Alaska so as to make general revisions and to provide that the Board of Regents prepare all documents and proceedings necessary to such bond issue. (H.B. 366)

2-2* Building Construction (Ch. 68) Appropriates $378,000 for completing the gymnasium at the University of Alaska. (H.B. 311)

2-3 Community Colleges (Ch. 75) Assigns to the University of Alaska complete operational control of community colleges; defines size of high schools which could be included in a community college program. Repeals Ch. 57, Laws of 1953, as amended by Ch. 58, Laws of 1955. (S.B. 267)

2-4 Retirement (Ch. 78) Amends existing law relating to the Teachers' Retirement System so as to define teacher and base salary. In addition, to further clarify the following three areas: (1) contributions by teachers, (2) interest on individual accounts: payment on withdrawal from system, and (3) payment upon death of teacher. (S.B. 227)

2-5 Bond Issue (Ch. 121) Authorizes a total of $5,950,000 of general obligation bonds to construct academic and related facilities at the University of Alaska, subject to ratification at the next general election to be held on November 6, 1962. (H.B. 460) (Approved in general election.)

2-6* Appropriation (Ch. 167) Makes appropriations for various departments of the State, including the following (H.B. 317):

Section	Current Operation	$Amount (1962-63)
2	Office of the Governor for the Western Interstate Commission for Higher Education	38,200
2	University of Alaska	
	Academic services	2,500,249
	Community colleges	130,848
	Agricultural Extension Service	140,000
	Agricultural Experiment Stations	185,000
	Geophysical Institute	200,648
	Institute of Marine Sciences	138,650
	Institute for Research in Business, Economics and Government	5,415

Section	Capital Outlay	$Amount (1962-63)
3	University of Alaska	
	Advance planning for Library and Fine Arts Building	60,000
